

Type 10

Neoprene Flexible Connectors

Single-Sphere and Twin-Sphere Flexible Connectors shall be molded of neoprene and synthetic fiber and furnished with corrosion resistant floating steel flanges. Operating temperature to 240°F and operating pressure to 214 psi. Compensates for expansion, compression, transverse movement and angular deflection. Reduces vibration and noise transmission. Size 1 1/4" to 20" I.D.

Where piping is not anchored, control rods must be installed at each connector to limit movement within their specified limits.
