

VMC GROUP TO ACQUIRE FABREEKA AND TECH PRODUCTS, STRENGTHENING ITS CONTROLLED ENVIRONMENT SOLUTIONS PLATFORM

BLOOMINGDALE, NJ - May 11, 2026: VMC Group, a leading engineering and manufacturing platform for vibration isolation, seismic restraint, shock control, noise attenuation, and airflow solutions, today announced it has entered into a definitive stock purchase agreement with STABILUS to acquire Fabreeka Holdings, including Fabreeka Germany, Fabreeka USA, and Tech Products for \$92 million. The transaction is expected to close within 30 days. The acquisition adds a century-old engineering solutions brand and expands VMC Group's ability to serve customers across North America and global markets.

Fabreeka Holdings is a 100-year-old manufacturer of precision vibration isolation, shock control, and thermal break solutions serving building and construction, industrial machinery, heavy equipment, infrastructure, transportation, energy, precision equipment, and testing markets. Its engineered pad, bearing, leveler, foundation isolation, and pneumatic isolation product lines are a natural complement to VMC Group's existing portfolio and reinforce the Company's ability to deliver integrated solutions across all five environmental force types: air, noise, seismic, vibration, and shock.

This transaction is VMC Group's most dynamic acquisition to date. It advances its mission to become the preferred engineering partner for controlled environment solutions, serving customers where precision, certification, and proven performance are essential. Fabreeka's heritage of manufacturing quality, ISO 9001:2015 certification, and production operations align directly with VMC Group's standards for engineering excellence and customer commitment.

"We are pleased to welcome Fabreeka Germany, Fabreeka USA, and Tech Products to the VMC Group family of companies," said John Wilson Jr., Chairman and Chief Executive Officer of VMC Group. "This marks another important step in our journey from good to great. Together, we will expand our technical capabilities, broaden our market reach, and enhance our ability to help customers mitigate the negative impacts of air, noise, seismic, vibration, and shock in mission-critical environments. We are grateful for everyone who worked to bring this complex transaction to completion, and we especially thank our partner Broadview Group for their continued support and commitment to our shared vision."

"VMC Group has built a strong, engineering-led platform with a clear strategy for long-term growth," said Clay Hunter, Chief Executive Officer of Broadview Group. "Broadview is proud to support John and the VMC team as they continue to invest in differentiated capabilities, enduring customer relationships, and companies with the technical depth and market credibility that Fabreeka and TechProducts bring to this platform."

The acquisition underscores VMC Group's commitment to disciplined, strategic growth through engineering excellence, technology, and people. The Company continues to actively evaluate opportunities that expand its controlled environment solutions platform and reinforce its position as the partner of choice for engineers tackling the most demanding applications in the industries they serve.

ABOUT VMC GROUP

VMC Group is the leading engineering and manufacturing platform for controlled environment solutions, providing vibration isolation, seismic restraint, shock control, noise attenuation, and airflow management solutions across commercial HVAC, infrastructure, military and aerospace, industrial OEM, power generation, and additional markets. As the only company delivering solutions across all five environmental force types, air, noise, seismic, vibration, and shock, VMC Group partners with engineers and specifiers to protect the environments and critical systems that people depend on. VMC Group is headquartered in Bloomingdale, NJ. For more information, visit thevmcgroup.com.

ABOUT FABREEKA AND TECH PRODUCTS

Founded over 100 years ago, Fabreeka International and Tech Products design and manufacture application-specific vibration isolation, shock control, and thermal break solutions for demanding applications across building and construction, industrial machinery, heavy equipment, transportation, energy, precision equipment, and testing industries. Fabreeka Holdings has been a part of the STABILUS group since 2016. For more information, visit fabreeka.com, novibes.com.
